BNC BI

Investment Strategy

Bluenose Capital Management will take advantage of the financial markets using diversified strategies. Some of these strategies involve the selling of time (calls and puts) on stock indices or other suitable commodities. At times the manager may purchase calls and puts to reduce margin or to take advantage of what the manager believes will be a profitable trade based on market conditions. The manager looks for investment opportunities trying to capitalize on the fear and greed of the average investor. The manager will follow a long-term plan for portfolio growth and protection. There are times when the strategy is not in the markets at all and others when we are fully invested. At present, the main strategy that best meets managers criteria for effective growth to risk management is one that focuses on the writing (selling) of options using futures contracts of indices and other commodities. The manager currently offers two programs, BNC EL and BNC BL BNC BI uses full contract markets.
